

# MM01 studio to studio solution supporting EBU TECH 3326, AES67 incl. SAP and RTSP

### Description

2wcoms studio to studio solution is based on our MM01 audio over IP codec. The MM01 enables users to connect remote sites in a safe and reliable way using industry adopted standards for audio over IP streaming, such as: ProMPEG FEC, EBU Tech 3326, AES67 with SAP and RTSP. For best timing performance all MM01 can synchronize to a PTP clock. For maximum service availability, the MM01 features the Stream4Sure mechanism for multiple fallback redundancies.
